Product and interaction designer connecting business needs, interface decisions and AI-assisted prototypes. I clarify scope, review generated proposals and coordinate testable handoffs with engineering colleagues.

RELEVANT EXPERIENCE

Shenzhen ZNZL HAAS Technology Co., Ltd. | Remote

Product Research & Prototyping (R&D) | 2025–Present

Bridge requirements, interaction review and prototype delivery with product, software and hardware colleagues.

SELECTED DESIGN WORK

Fire Equipment Management

Primary company project · Requirements, interaction review & delivery | 2026–Present

- Contributed to four-month platform delivery in a five-person team; the CTO initially estimated 22 people for comparable scope.
- Clarified multi-site ownership, site certification and installation responsibilities through overseas requirements discussions.
- Reviewed task acceptance and status feedback across apps; challenged a long reporting sequence and narrowed the first admin dispatch workflow.
- Reviewed AI-assisted proposals, set workflow priorities and acceptance checks, and coordinated test/build handoffs and a known-working demo baseline with engineering.

Smart Livestock Monitoring

Field research · UI · Android MVP | 2026

- Conducted three days of field research; contributed UI, handoff and an AI-assisted Flutter MVP with simulated data. Full flows, IA and specifications were team deliverables.

Microinverter App

Figma prototype · Developer handoff

- Created a manual Figma interface prototype for a grid-connected/off-grid app and handed it to a backend team.

EDUCATION

University of Sydney | Bachelor of Design (Interaction Design)

Expected completion around June 2027

METHODS & TOOLS

Field interviews · Research synthesis · Interface design · Developer handoff · Prototype review · Figma · AI-assisted Flutter prototyping
