Product and interaction designer connecting business requirements, interface design and AI-assisted prototypes. I take scoped work from ambiguity to testable delivery, reviewing generated outputs and defining priorities and acceptance checks to help small teams move forward.

EDUCATION

University of Sydney

Bachelor of Design (Interaction Design)

Expected completion around June 2027

METHODS & TOOLS

Field interviews

Research synthesis

Interface design

Developer handoff

Prototype review

Figma

AI-assisted Flutter prototyping

RELEVANT EXPERIENCE

Shenzhen ZNZL HAAS Technology Co., Ltd.

Product Research & Prototyping (R&D)

Remote | 2025–Present

Bridge requirements, interaction review and prototype delivery with product, software and hardware colleagues.

SELECTED DESIGN WORK

Fire Equipment Management

Primary project · Longest involvement | 2026–Present

- Contributed to platform delivery in four months within a five-person team, against an initial CTO staffing estimate of 22 people for comparable scope.
- Clarified site-level certification, multi-site ownership and installation responsibilities through overseas requirements discussions.
- Reviewed account/site boundaries, cross-app task journeys and status feedback; shaped an admin-centred dispatch workflow and narrowed its initial scope.
- Prioritised workflows and acceptance checks; coordinated test/build handoffs and a demonstration baseline with engineering and AI-assisted implementation.

Smart Livestock Monitoring

Field research · UI · Android MVP | 2026

- Conducted three days of field research; contributed UI, handoff and an AI-assisted Flutter MVP with simulated data. Full flows, IA and specifications were team deliverables.

Microinverter App

Figma prototype · Developer handoff

- Created a manual Figma interface prototype for a grid-connected/off-grid app and handed it to a backend team.
